FRAME ASSEMBLY

5/8 INCH FRAME

Lay out the frame pieces, flat side down. Show the channel facing upward.

Insert corner connectors into two frame pieces, bringing the sides of the frames together.

1 INCH FRAME

For 1" depth Infinity frames, there will be 8 total corner connectors: (4 Part A's and 4 Part B's).

Stack Part A over each Part B corner connector before joining the sides of the frame.
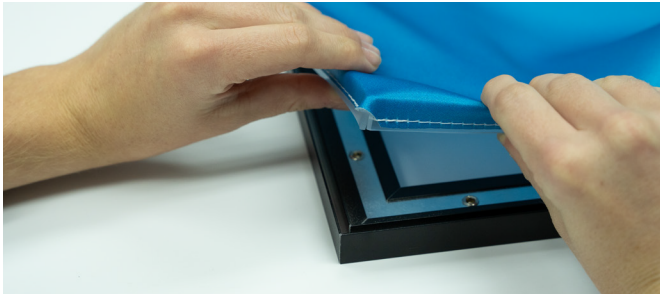

Use the allen key to tighten, repeat to the closest corner. Insert the last two corner connectors into the remaining sides of the frame. Do not over-tighten corners.

Slide the final edge of the frame into already connected frame pieces (think closing a drawer). Tighten remaining corner connectors and your frame will be fully assembled!

INSERT PRINT

Lay your print over the frame, artwork side up! Fold the silicone edges down at one of the corners (like a pizza box). Press the folded corner into the channel of the frame at the corner. You should not be able to see any silicone once inserted.

Move to the opposite corner and repeat (similar to a fitted bedsheet). Insert the two remaining corners.

Starting at the middle of each side, press the silicone into the channel, working towards the corners until evenly inserted all the way around. You are now ready to hang!

HANGING

1" Wall Mount   5/8" Wall Mount

Depending on the size of your frame, there will either be a 5/8" or 1" wall mount.

1. Pre-drill two holes in the location where you would like to secure the wall mount. Gently tap wall anchors into each hole with a hammer.

2. Hold the wall mount over the pre-drilled holes with the wall anchors. Fasten the screws into the wall anchors to secure the wall mount.

Hang your artwork on the wall using the metal channel on the back of the frame.

SIT BACK AND ENJOY!
